Mapping Method

- * get all ASs from AS Relationships
- * look up country of each AS
- * merge all foreign ASs into 'Rest of World' AS
- * generate a network graph for each country's ASs

AUTONOMOUS SYSTEM DIAGRAM - India

Country Summary:
Network Complexity: 3.120
17,984,960 IP Addresses
4 Points of Control:
4,496,240 IPs per Point of Control

AUTONOMOUS SYSTEM DIAGRAM - India

Country Summary:
Network Complexity: 3.120
17,984,960 IP Addresses
4 Points of Control:
4,496,240 IPs per Point of Control

Points of Control Method

- * look up number of IPs for each AS
- * traverse up tree of ASs for each country
- * add the number of IPs of each AS to its providers.
- * for multiple parents, divide by number of parents (caveats below!)
- * add AS with most connected ips to points of control set
- * add next AS with most connected ips excluding ASs in points of control set or their consumers
- * continue until 90% of total ips of the country are included

Complexity Method

- * $C = AS * \sum (CI(a) / I) / I$
- * C = Complexity
- * AS = total number of ASs for country
- * \sum = sum for each AS in country
- * $CI(a)$ = connected IPs for AS
- * I = total IPs in country

- * A network is more complex if it:
 - * has more ASs per IP address,
 - * has more connections per AS, and
 - * has more of its IP addresses at edges of network
