# CROWDSOURCED SENSING & COLLABORATION USING SMARTPHONES & SOCIAL NETWORKING

**Murat Demirbas**  
SUNY Buffalo

# Smartphones!

- \* 3-4B cellphone users worldwide
- \* 1.13 billion phones sold in 2009 (36 per sec) vs 0.3 billion PCs
- \* 174M were smart phones
- \* 15% (up from 12.8% in 2008)

# Go smartphones!

- \* ~Pentium III, +WiFi, GSM, Bluetooth, +camera, mic, GPS, compass, proximity, ambient light, ambient noise, accelerometer, touchscreen, temperature
- \* Cared for by the user, mobile coverage, human intelligence included
- \* Combine that with singlehop access to the cloud!

# Status quo in smartphones

- \* Each device connects to Internet to download/upload data and accomplish an individual task that does not require collaboration and coordination

# What is missing?

- \* An infrastructure to task/utilize these devices for collaboration and coordination
- \* Any node should be able to search & aggregate the data published by other nodes in a region, as well as task nodes in the region to acquire the needed data

# DARPA's grand challenge

- \* Find 10 balloons in US accurately and quickly
- \* Exploring the roles the Internet and social networking play in the timely communication, wide-area team-building, and urgent mobilization required to solve broad-scope, time-critical problems

# Our work

- \* We provide a crowdsourced sensing and collaboration service using Twitter to enable aggregation and sharing of data as well as tasking of other cellphones

# Why Twitter?

- \* Open publish-subscribe system: Different actors may integrate published data differently, and in unanticipated ways to offer new services
- \* Social networks aspect is useful for crowdsourced sensing and collaboration applications
- \* ~200 million users, 200 million tweets & 1.6 billion queries everyday

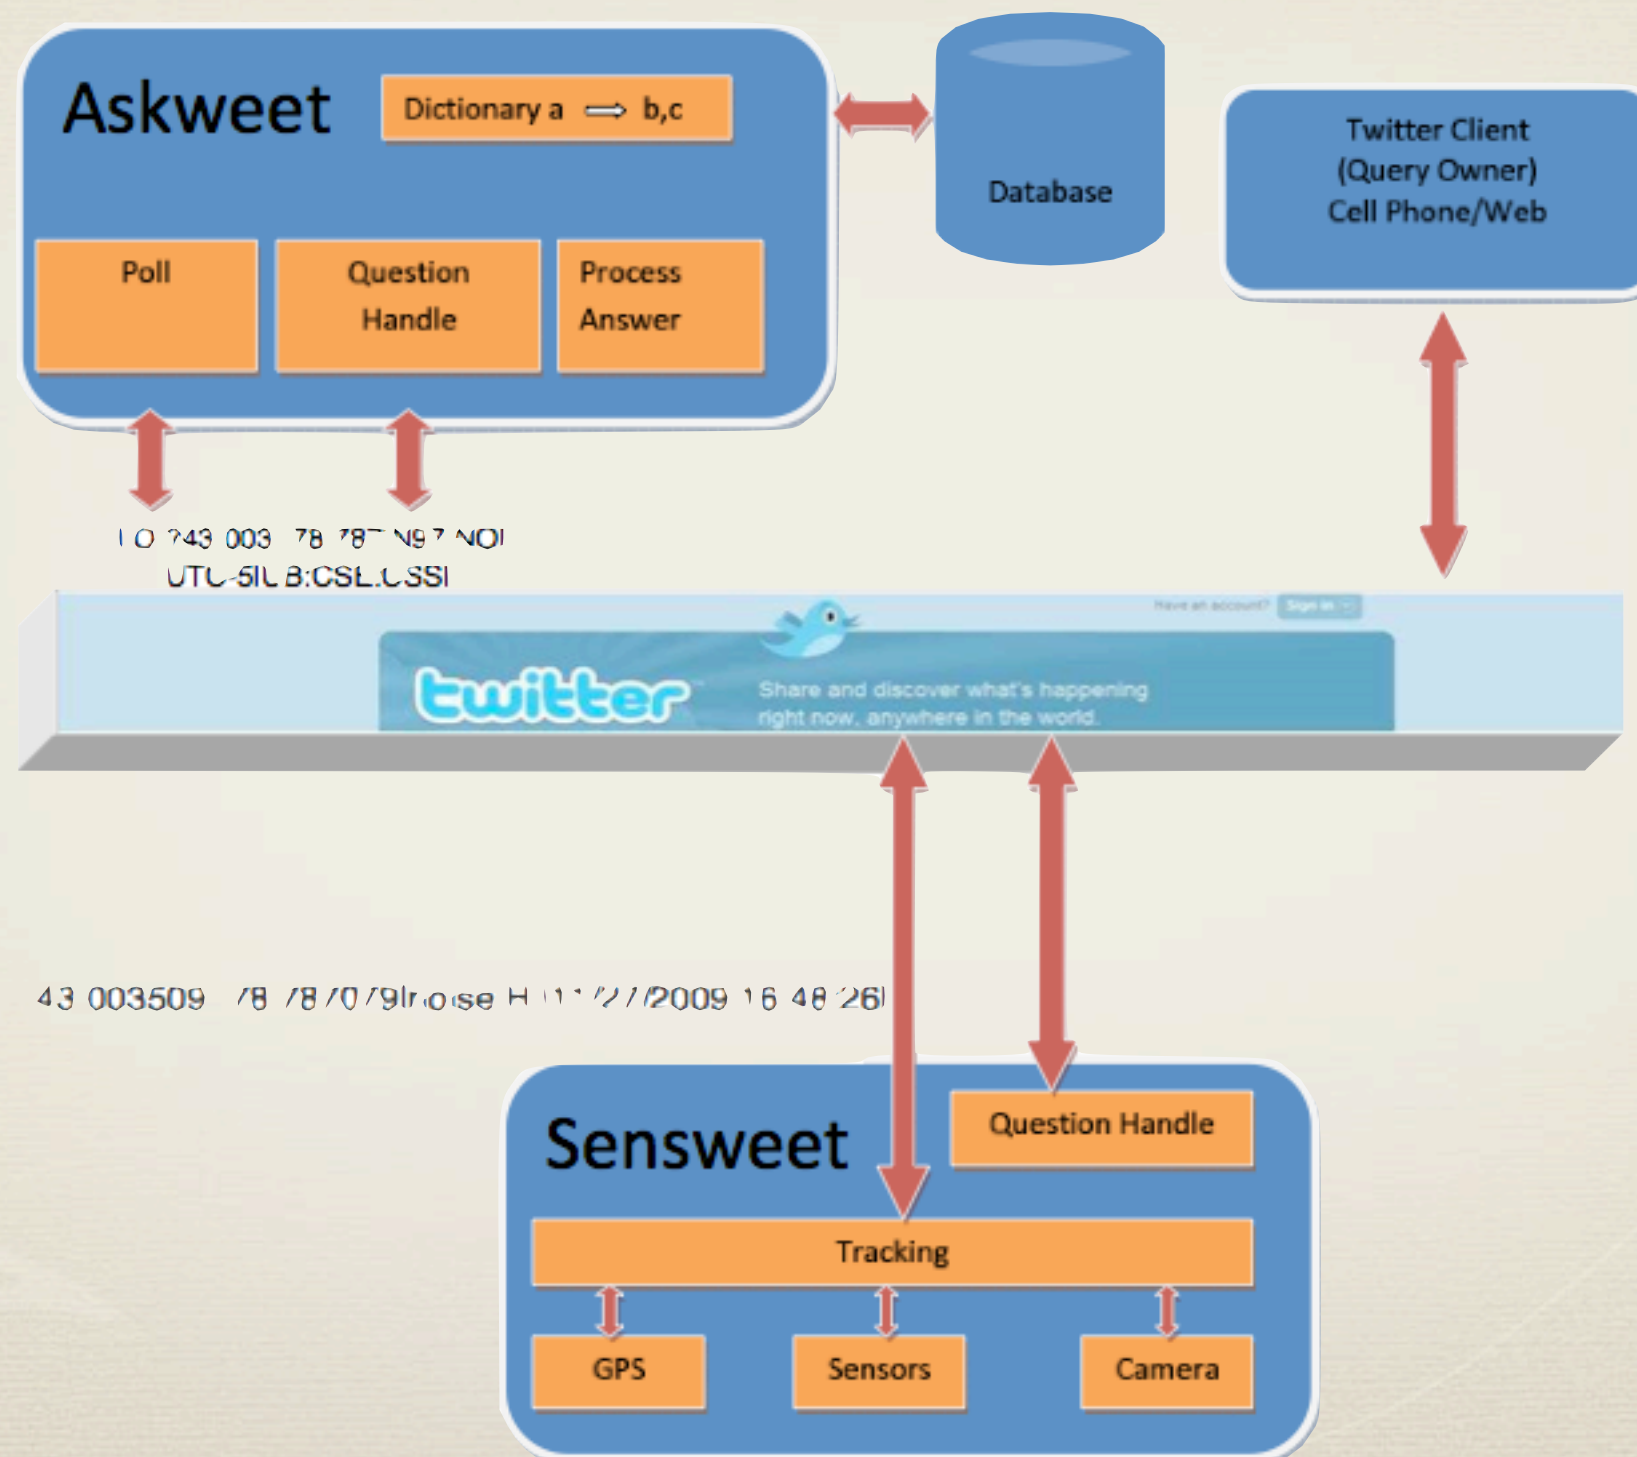

# Outline

- \* Twitter bot architecture for crowdsourcing
- \* Crowdsourcing location-based queries
- \* Other work: Upinion, CityPulse, UBupdates, PhoneLab

# Architecture

# Crowdsourced weather app

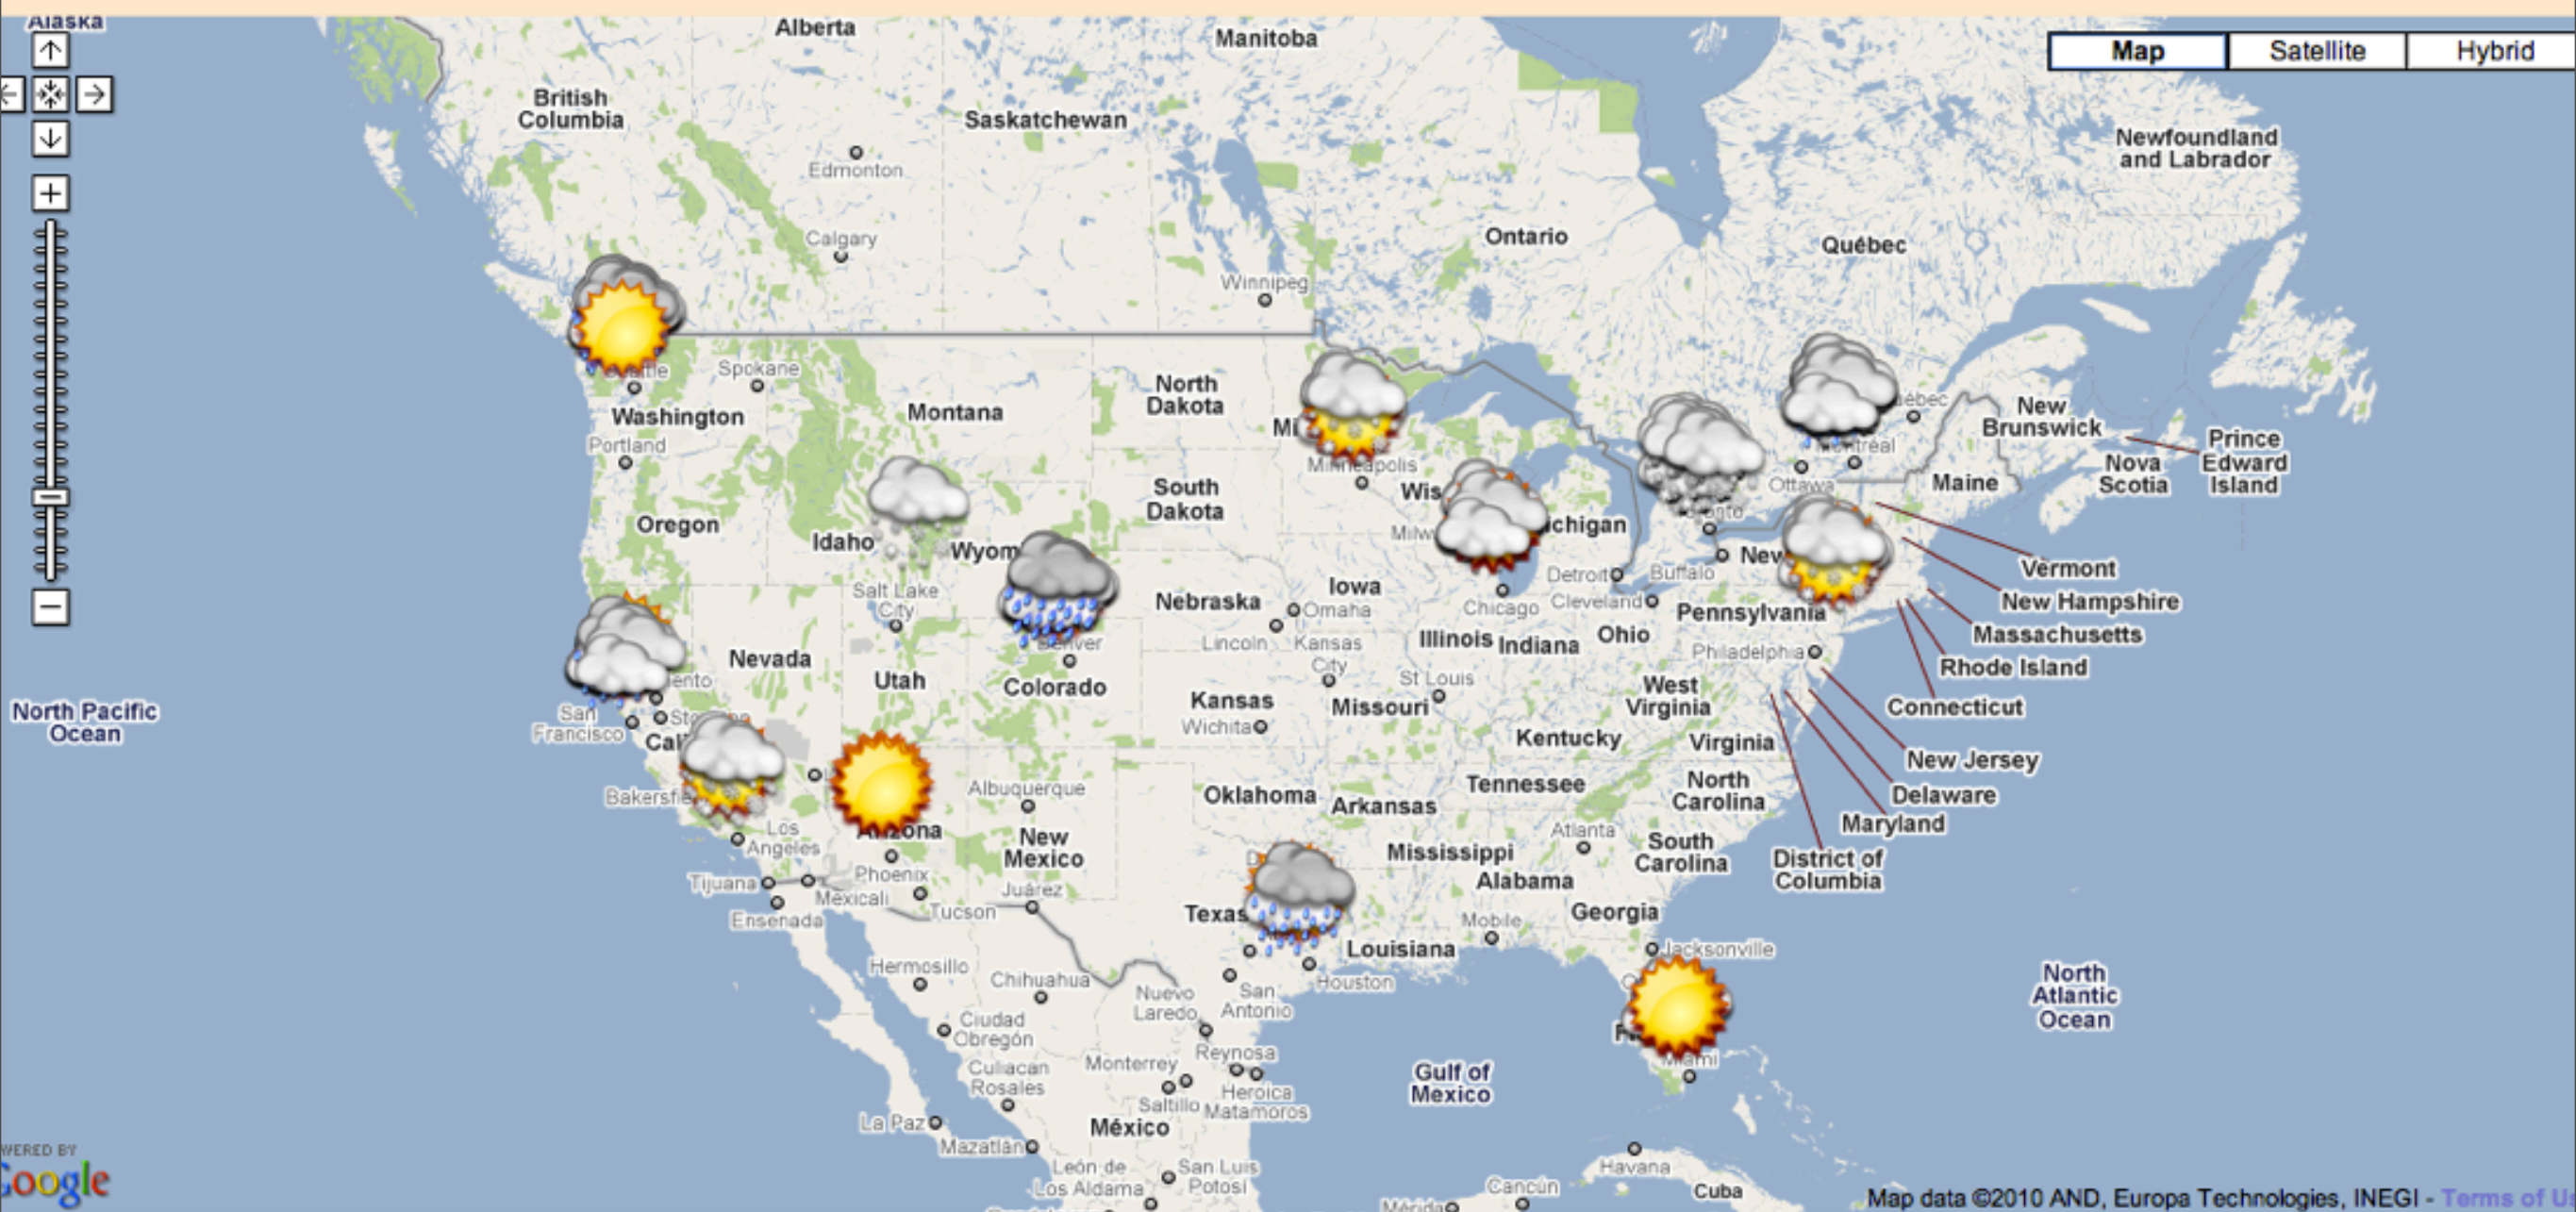

- \* Current weather, everybody on Twitter can be an expert
- \* Question to Askweet: “?Weather Loc:Buffalo,NY”
- \* Forwarded question: “How is the weather there now? reply 0 for sunny, 1 for cloudy, 2 for rainy, and 3 for snowy”

WOWMOM'10

Funded by Google

<http://ubicomp.cse.buffalo.edu/rainradar>

Select Date from here :

Selected date is : 2010-01-05

The map is configurable to show results from previous days, and also is zoomable to show fine-grain locations of the replies.

You can select dates between December, 3 2009 and January, 6 2010 to see the results!

# Response time

# Smartphone ratio

# Location-based queries app

- ❖ We integrate mobility profiling to our Twitter crowdsourcing architecture to answer location-based queries more effectively
- ❖ We use category and location information provided by Foursquare to direct questions to mayors in queried locales
- ❖ We get better answers for food, nightlife, colleges

CHECK-IN  
FIND YOUR FRIENDS  
UNLOCK YOUR CITY

# Answer rates

- \* Our system answered approximately 75% of the questions, compared to Google's 47% answer rate on these questions
- \* While our system answered 75% of both the factual and the nonfactual questions, Google answered 78% of the factual questions and only 29% of the nonfactual questions.

# Cumulative distribution of response times

# One more thing

- \* 80% of the answers came from smartphones compared to 20% from PC/laptops !

okay, Marlon...

...this Twitter  
thing has gone  
far enough.

## OUR OTHER WORK

# Upinion

- \* Data mining over Twitter for identifying breakpoints in public opinion for a given keyword

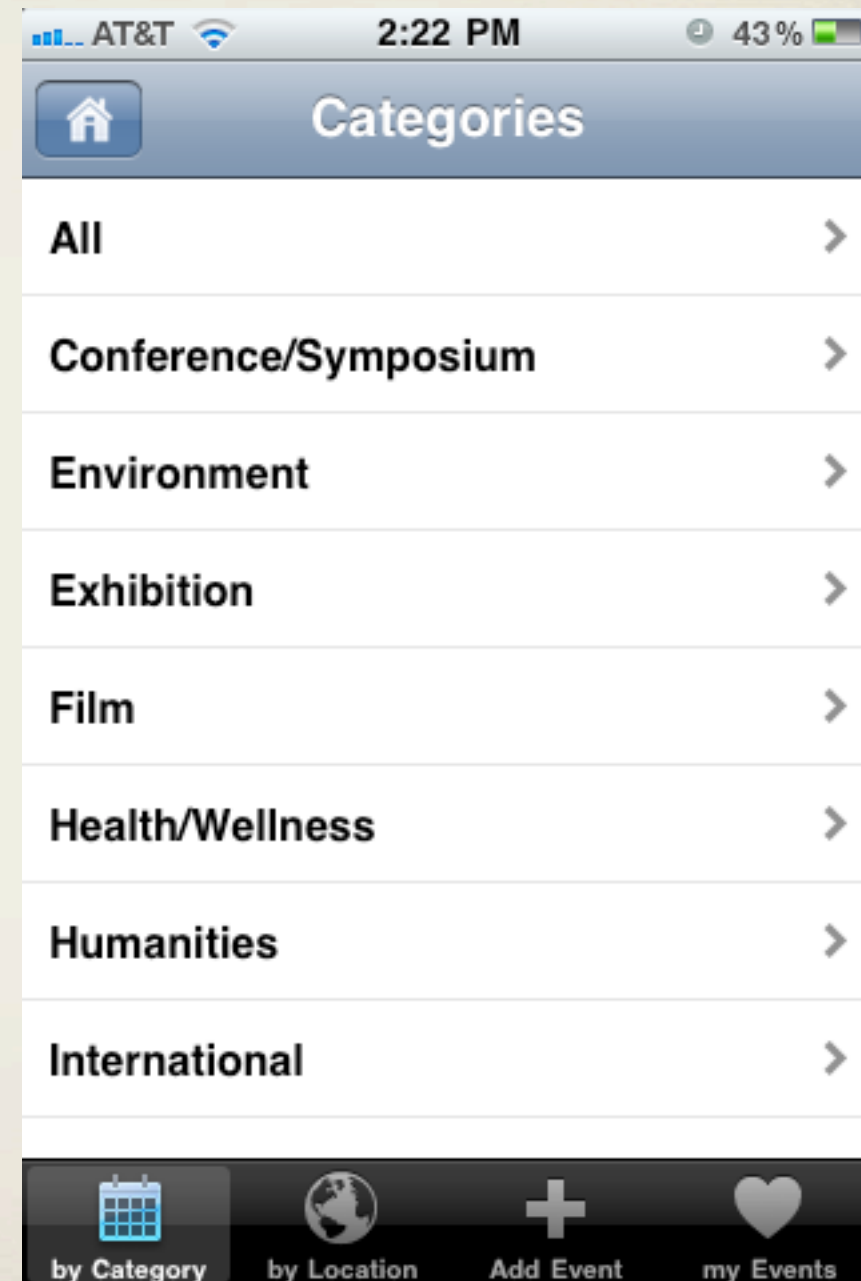

BLUNT RAVING LAUGH FUN  
GLOOM CUT  
SORROW ABHORRANT QUIET  
COMPOSED  
TENDER  
LAUGH AIR Y LOST  
SENSATIONAL ENTICING RECKLESS

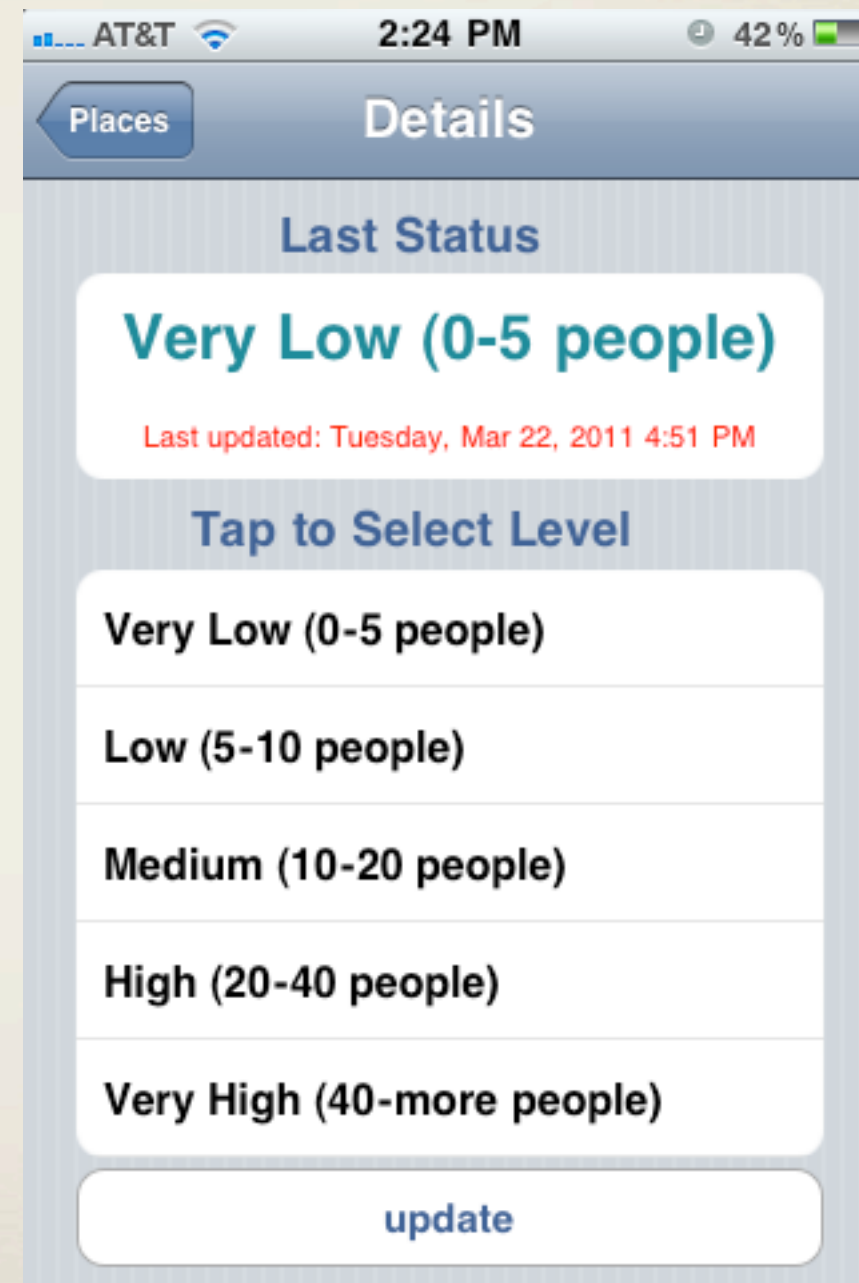

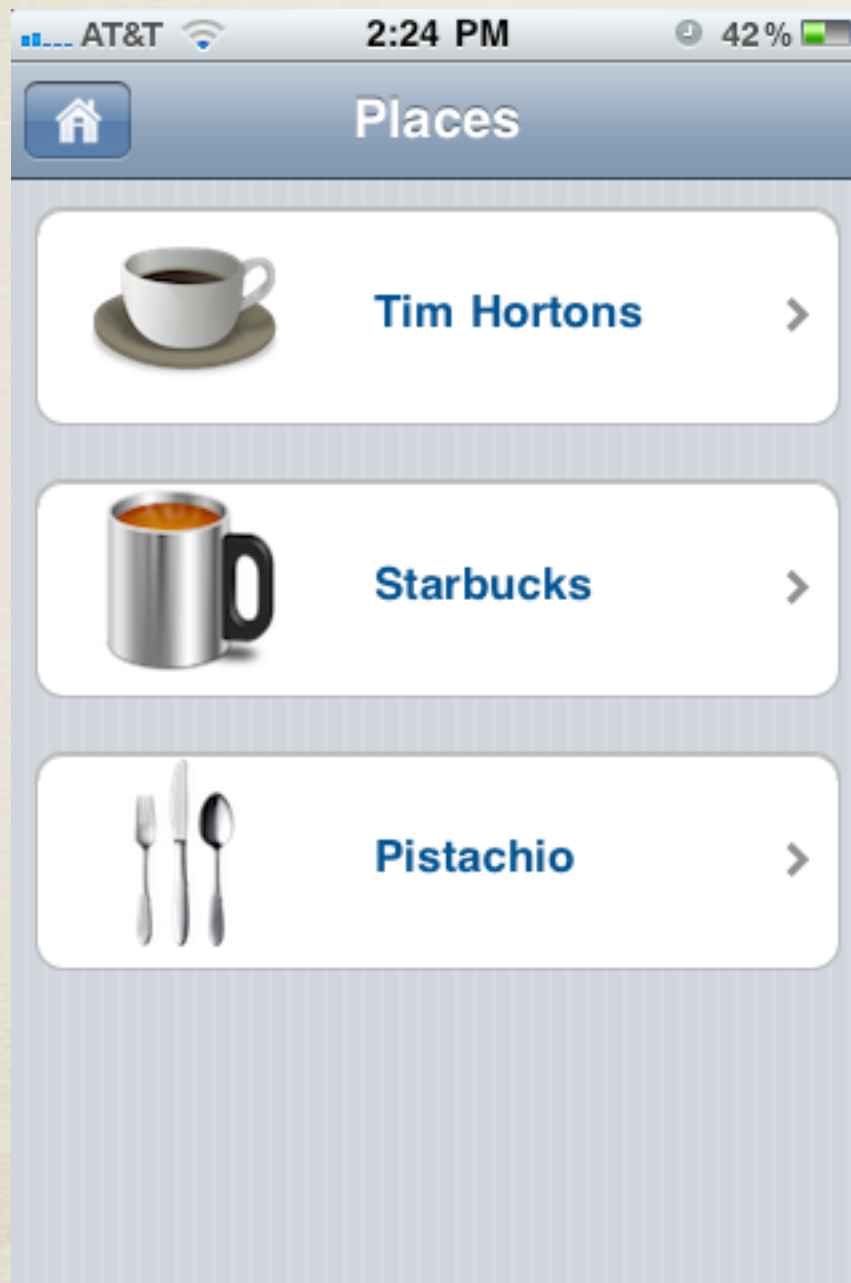

# UBupdates

# UBupdates

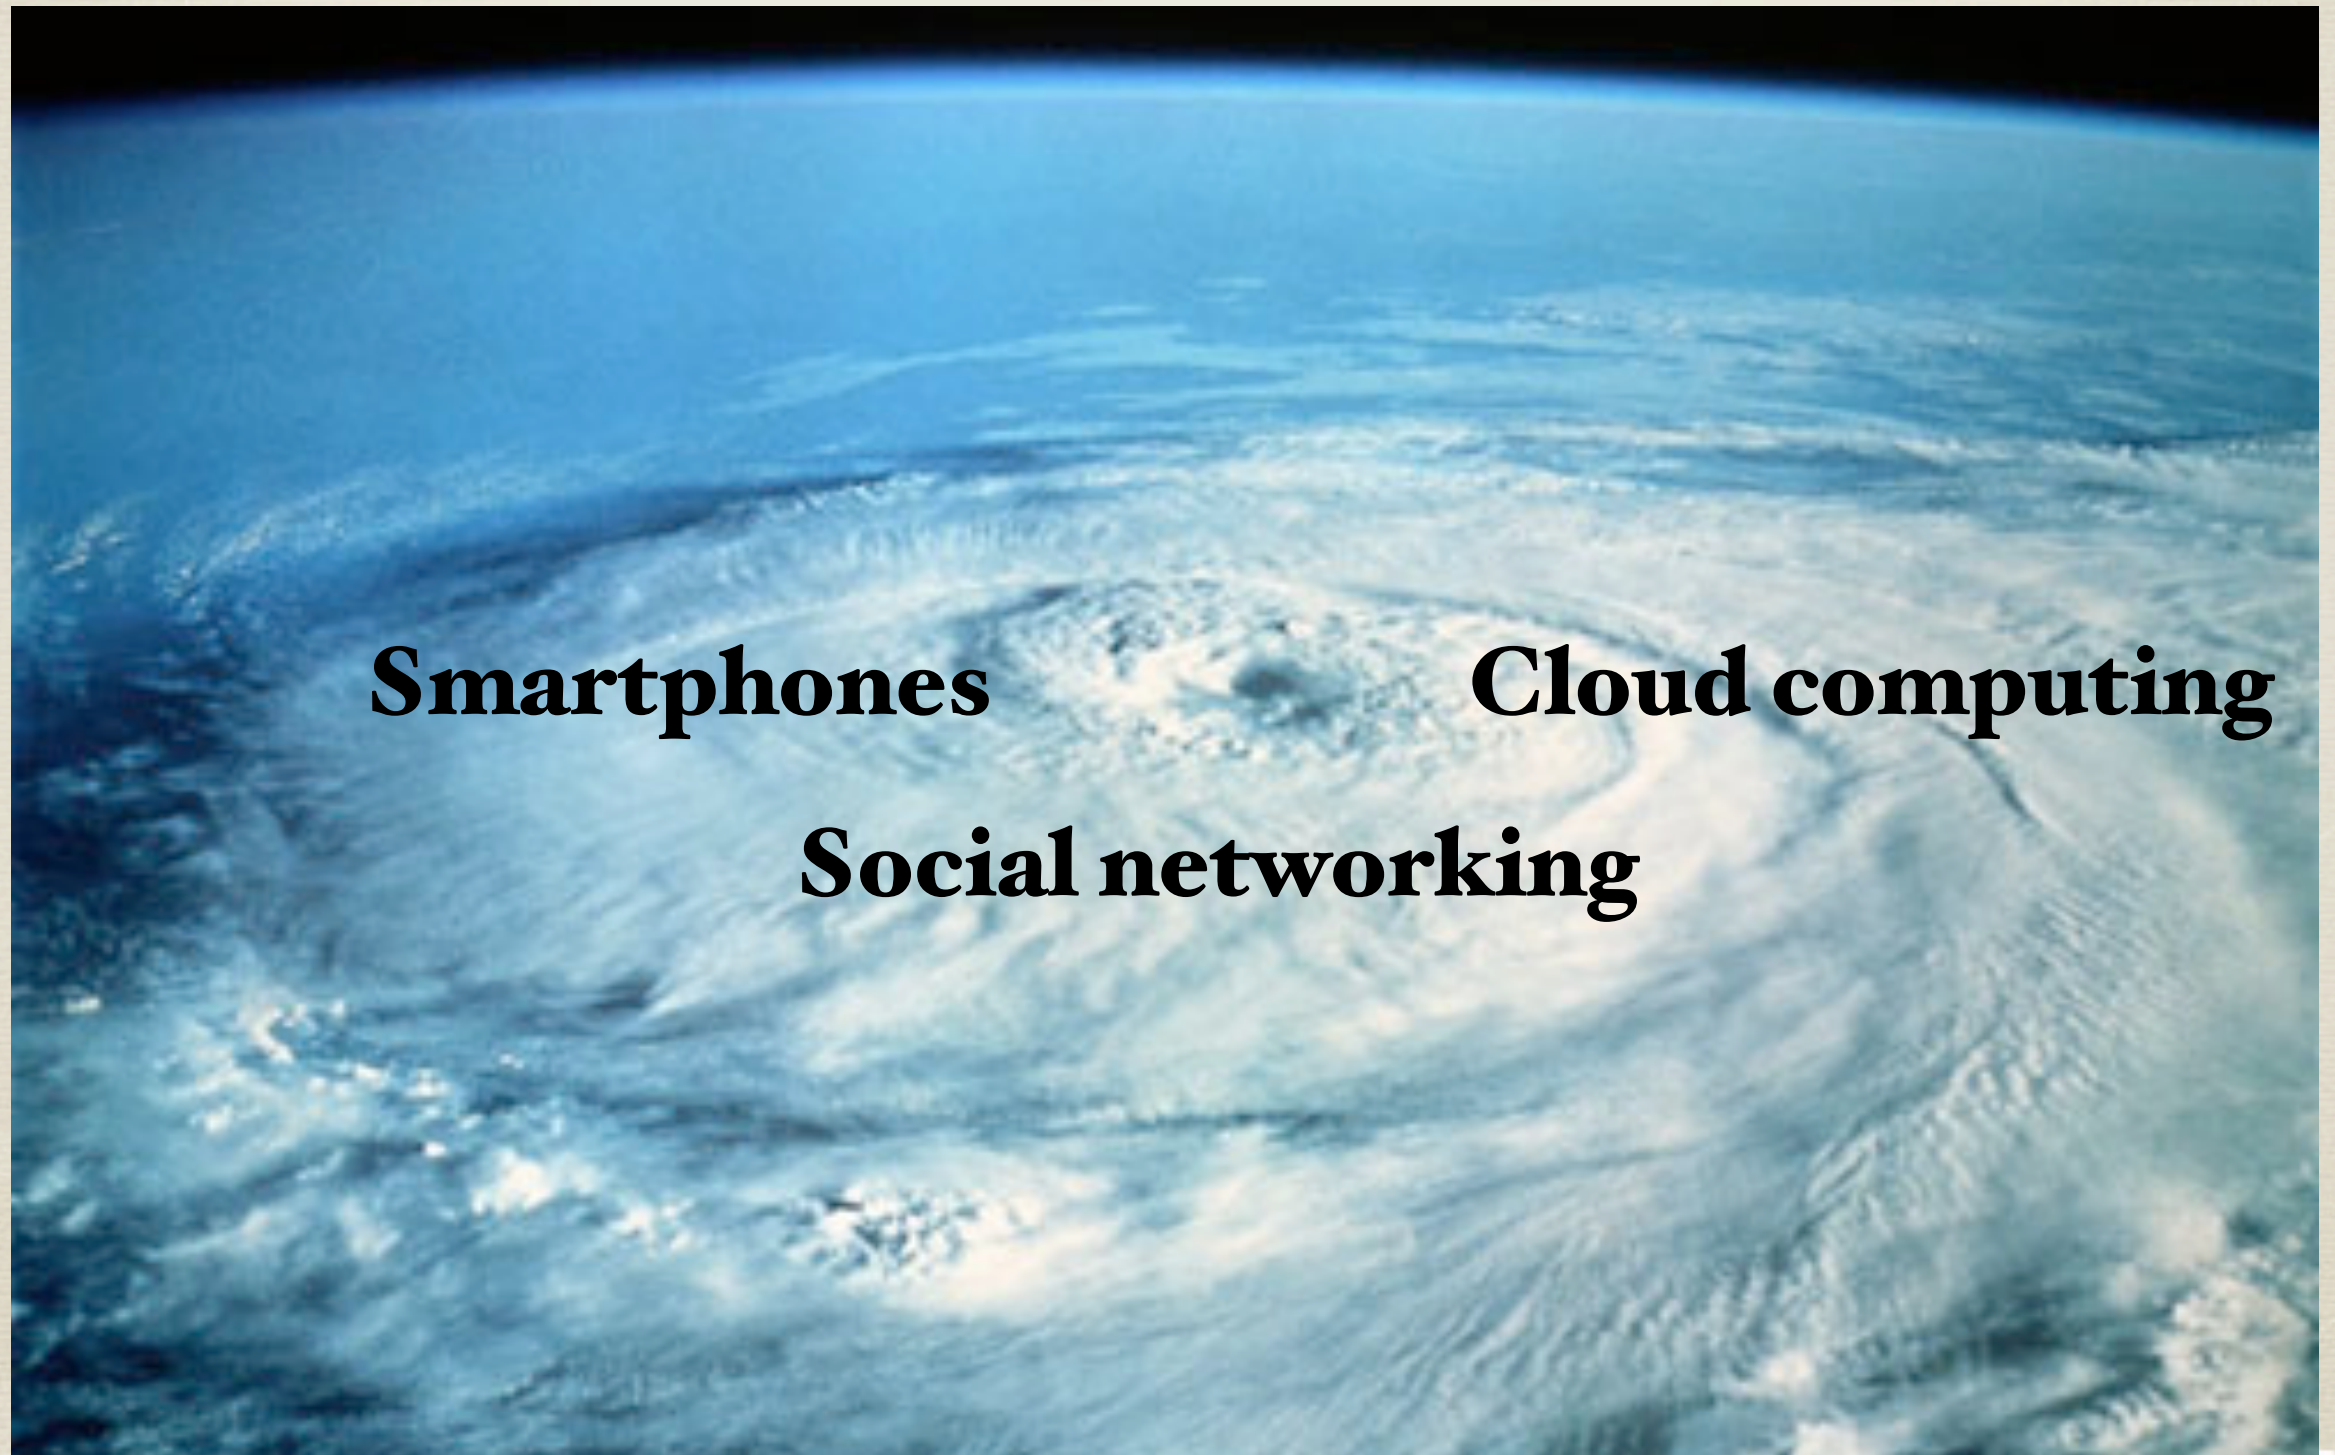

# Jeopardy! grand challenge

- \* Build an expert-sourced system to beat Watson in Jeopardy!

# Perfect Storm

# PhoneLab

- \* We are building a 1000 phone reprogrammable testbed
- \* Geoffrey Challen, Murat Demirbas, Steve Ko, Tevfik Kosar, Chunming Qiao @ **Univ at Buffalo**
- \* Dense, controlled, yet realistic environment for testing and developing next generation collaborative smartphone apps and operating systems
- \* Will be open to public
