

Pablo Gurman is a research scientist at The University of Texas at Dallas and research collaborator at the Institute for Soldier Nanotechnologies, at the Massachusetts Institute of Technology. He received his MD degree from the University of Buenos Aires, School of Medicine (UBA), Argentina, in 2002. His research interests include micro and nanotechnology for diagnostics and therapeutics, with focus on the science and technology of nanocarbon films, particularly ultrananocrystalline diamond (UNCD) films for applications to medical devices (e.g., UNCD-coated dental implants, UNCD-coated ophthalmological devices, and UNCD coated surgical tools) and BioMEMS/BioNEMS. He has published 7 papers, two encyclopedia chapters, and four book chapters, and he is an author of one book. Gurman has one patent granted and two patent pending. Gurman has extensive on clinical research and translational research in the field of nanomedicine. Dr. Gurman is co-founder with O. Auciello of Original Biomedical Implants (OBI LLC) (2013-present), to develop and commercialize a new generation of medical devices based on micro and nanotechnology. He can be reached at The University of Texas at Dallas, Richardson, TX, USA; tel. 972-883-4881; and email pablo.gurman@utdallas.edu.
