

Revision of IEC 60780  
Discussions in SC45A WGA9 in  
London in April 2008

Kjell Spång

# Status

- The original reason for IEC SC45A to ask SMB for a derogation allowing it to start a revision of IEC 60780 was the wish from IEC SC45A and IEEE SC-2 to make a parallel revision of IEEE 323 and IEC 60780 with the purpose to bring them in line.
- However, IEEE has decided not to initiate a revision of IEEE 323 at present.
- In spite of this, WGA9 decided at their London meeting to go ahead now with revising IEC 60780 aiming at avoiding technical differences between IEC 60780 and IEEE 323-2003.

# Schedule

- First meeting to be held preliminary in Stockholm or Forsmark in conjunction with the meeting of the condition monitoring group (i.e. end of September 2008).
- Invited: Members of WGA9 and experts from IEEE SC-2.1
- First Committee Draft to be sent to the National Committees in April-May 2009
- IEEE SC-2 to decide on expert from SC-2.1
