ISA Liaison Report

- SP67 is the ISA group responsible for all Nuclear Power Instrumentation standards.

- We meet at least yearly at the EPRI/ISA POWID conference.

ISA Liaison

- There was discussion of the recent practice of issuing NRC and EPRI and NEI documents for guidance that aren't supported by a standards committee such as ISA or IEEE or ASME.

- This was done because standards covering the topics did not exist.

- Such documents don't have owners, are not always consensus documents, and aren't on a regular schedule for review and update or reaffirmation.

- SP67 decided to form several working groups to address some of the recent NRC Digital Instrumentation & Controls Interim Staff Positions.

ISA Liaison

- SP67.01 – Sensors – preparing to reaffirm

- SP67.02 – Inst Tubing - adding additional guidance

- SP67.03 – Leak Detection - preparing a full revision

- SP67.04 – Setpoints - reaffirmed standard, balloting the recommended practice

- SP67.06 – Performance Monitoring – preparing to reaffirm

- SP67.16 WG5 Cyber Security – new area, a lot of interest at the recent initial meeting

- SP67.15 WG6 Digital PRA – forming a working group

- SP67.15 WG7 Human Factors – forming a working group
