Grid Flexibility from Grid Edge

- *Decision-making on system need: which DERs should provide how much services?*

Grid edge DERs provide flexibility to participate grid services

i *DER-Load interactions are very diversified*

- *Decision-making on DER capability: which DERs can provide how much flexibility at what time duration?*

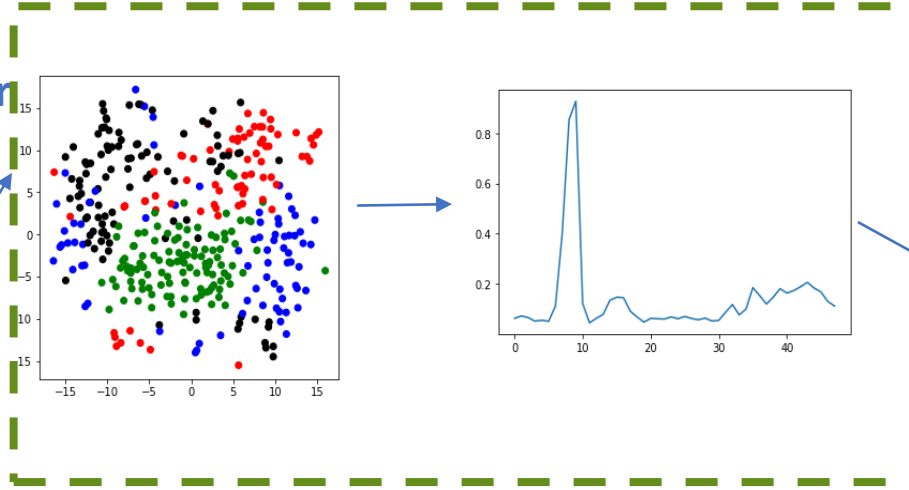

Solution → **Load and DER flexibility estimation**

DER-Load Flexibility Estimation

K-means and MLP to **cluster** the profiles

load pattern and characteristics

Load modeling

Consumption profiles

Transfer learning boosted LSTM to **forecast** the footprint

Solar/Wind Measurements
ES Model
Human Input

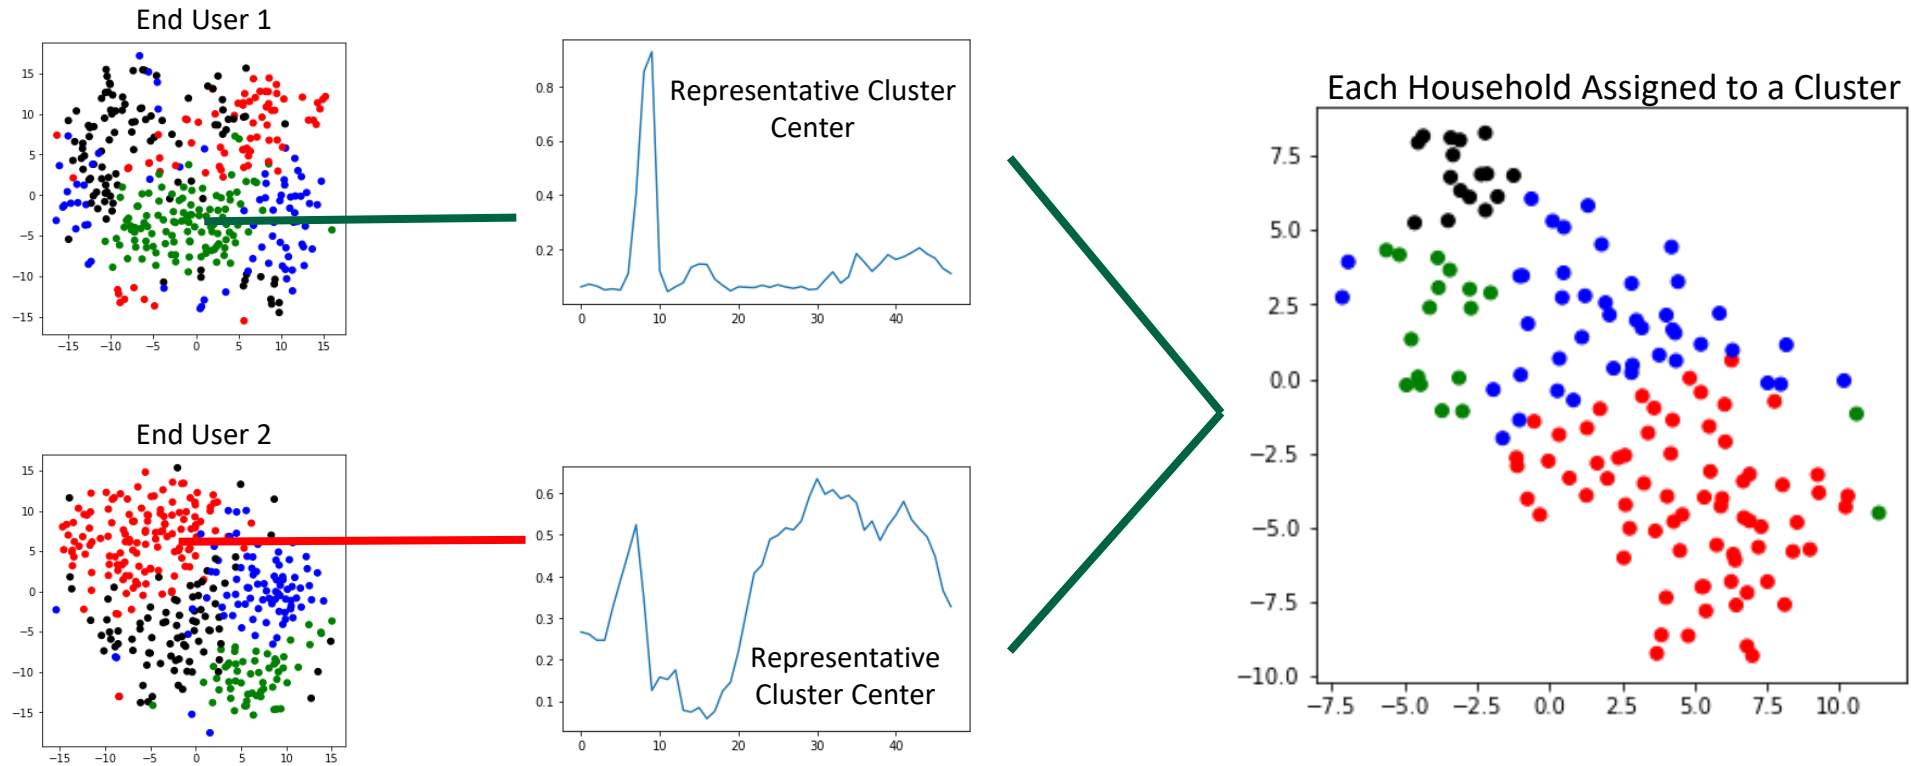

Flexibility Envelope

MLP: Multi-layer perceptron neural network

LSTM: long short term memory

Load Clustering

Clustering Methods

Hierarchical clustering:

- Agglomerative/Divisive algorithm

Partitioning clustering:

- K-means/K-Medoids/Fuzzy c-Means

Model-based clustering:

- Self-organizing maps

Method	Number of Clusters	Sihouette score
Kmeans	4	0.44
Agglomerative	4	0.34
Multi-layer perceptron	4	0.59

Load Forecasting

- Long Short Term Memory

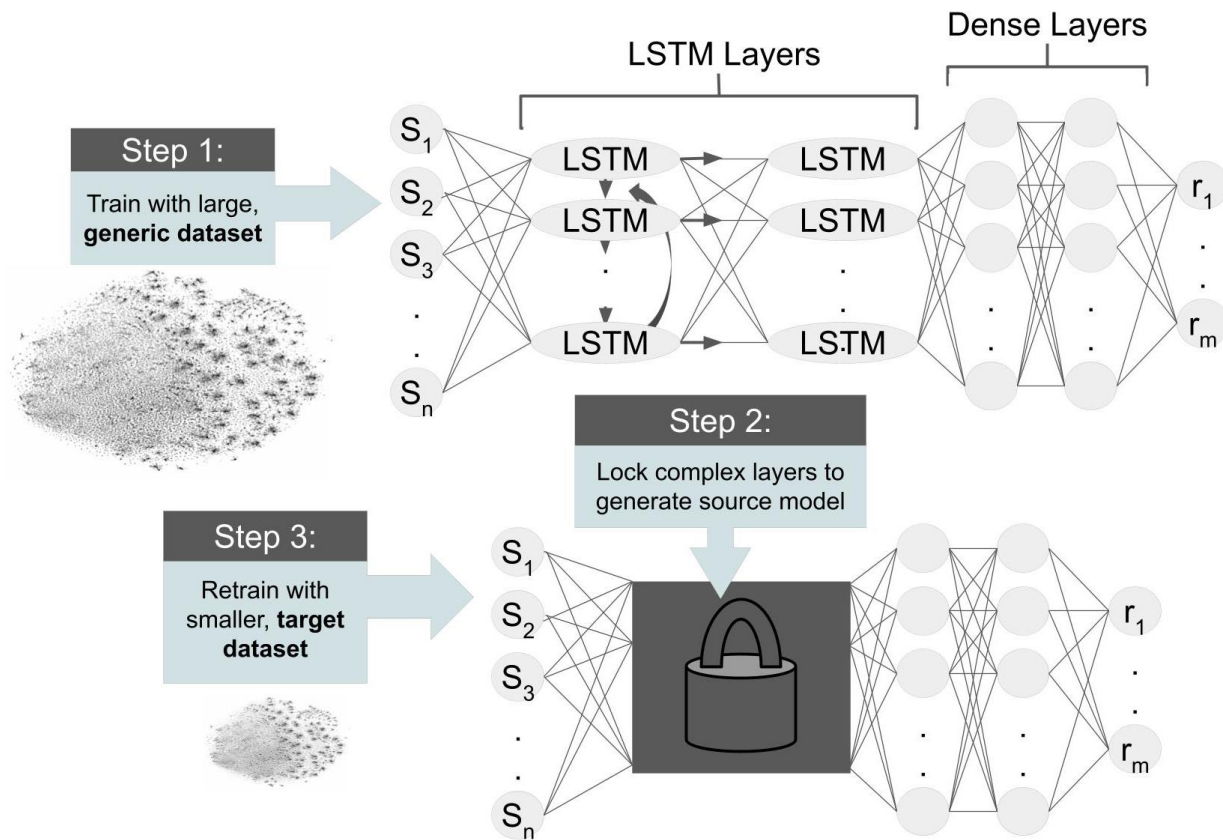

- Able to learn the daily trends of the electricity load profile
- Usually miss peaks

Transfer Learning Boosted LSTM

Results Comparison

Forecasting result example

Results Comparison

Improvement

	Max	Mean
G+C	30.00%	16.40%

G+C: Generic model + clustered data retrain

Baseline: LSTM only

K-means and MLP to **cluster** the profiles

load pattern and characteristics

Load modeling

Consumption profiles

Transfer learning boosted LSTM to **forecast** the footprint

Solar/Wind Measurements
Community survey

Flexibility
Envelope

LSTM: long short term memory

MLP: Multi-layer perceptron neural network

Demand Flexibility Estimation

- Different end users can provide different flexibility at different time of the day
- Need select appropriate end users to aggregate to obtain desired aggregated flexibility

Aggregated
