Building the future - Evolution beyond mobile internet

Eng. João Picoito

(Vice President,

***South Europe, Central and Eastern Europe, Central Asia,
Nokia Networks)***

RESUMO

Innovation is at the core of Nokia identity, the technology revolution will allow us to implement services or use-cases that we cannot even dream of today. The benefits for people, society, the economy and this industry can be very sizeable. Nokia Technology Vision 2020 focuses on enabling mobile broadband networks to profitably deliver 1 gigabyte of personalized data per user per day by 2020, while 5G is the technology that will enable this future. It will allow for massive traffic growth and number of devices, virtual zero latency and it will aggregate all pre-existing technologies while lowering energy consumption. It is mission critical that we create an environment where investments will be made and innovation will pay off.

BIO

João Picoito is vice president of South Europe, Central and Eastern Europe, Central Asia region at Nokia Networks and has more than 20 years of top management experience in the telecommunications industry. Graduated from the Technical University of Lisbon with an M.Sc. degree in Electrical Engineering and Computer Sciences, he has also undertaken an Advanced General Management Program at the European School of Management and Technology in Berlin, run in partnership between the Harvard University (USA) and the Humboldt University in Berlin. 'Personality of the Year' for his contribution to the development of the Information Society in Portugal (2004), awarded the title 'Commander of the Order of Merit in Agriculture, Commerce and Industry' in the Industrial Merit class by the president of Portugal (2006), awarded the degree Honoris Causa by the University of Aveiro (2006). In his free time, he teaches at the Post graduation course in the Economics Faculty of the Technical University of Lisbon since 2008.
