FOR A GROUP OF 3

As part of the IEEE Day 2023 celebrations, one of the events hosted by the IEEE Sensors' Council, Student Branch at NHCE was a unique quiz show with a touch of fun titled "Trivia with a Twist" on the 10th of October, 2023.

The theme for IEEE Day 2023 was "Leveraging Technology for a Better Tomorrow" and therefore the Sensors' Council came up with this exciting quiz contest with questions from various fields including technology.

Here is a brief of how the quiz was to be played: Teams of three are to be formed initially. There would be four rounds, each featuring different categories with questions and each question would be assigned a specific point value based on its

difficulty. Once the host selects a question from a category, teams would have to compete to earn the right to answer it through a bidding process and the team that places the highest bid would have the opportunity to answer the question. If they respond correctly, they will earn the allocated points for that question. However, if they answer incorrectly, the team with the second-highest bid would have a chance to answer. If the second team also fails to answer correctly, the question will become unavailable for the round. The team with the most points at the end of the event would be declared the winner.

There was a total of seven teams that participated in the event. They were greatly exposed to questions from a wide range of domains starting from nature to technology. Following the completion of four rounds, they were presented with three use cases and were asked to brainstorm on one of the topics. The teams actively participated throughout the event as they were provided with a platform to think quickly, answer wisely, and win, making it fun and a resounding success.
