## Europe's Semiconductor Talent Gap Widens

January 4, 2023 Anne-Françoise Pelé

# Today's Competition for Talent

- Tech-savvy students at HW/SW intersection thrive on collaborative/maker culture
- Infrastructure enabled by integrated circuits!

# IC Research “Ecosystem”

# Big-Bang Events: Open-Source PDKs

- First open-source PDK (November 2020)
  - › SkyWater 130nm CMOS
  - › <https://github.com/google/skywater-pdk>
- Second open-source PDK (October 2022)
  - › GlobalFoundries 180nm MCU
  - › <https://github.com/google/gf180mcu-pdk>
- Third open-source PDK (March 2023)
  - › IHP 130nm BiCMOS
  - › <https://github.com/IHP-GmbH/IHP-Open-PDK>
- Permissive Apache 2.0 licensing

Tim (mithro) Ansell (They/Them) · 1st  
Software Engineer at Google

# Open Source in a Nutshell

- Core principles
  - › Open exchange, collaboration, transparency, meritocracy
- Typical benefits (as seen in the software community)
  - › Improves productivity, managing complexity
  - › Enables community review and steady improvements, re-use
  - › Promotes education and tinkering
- Open source does not imply “free”
  - › Can make money with open-source products (Red Hat, Ruby on Rails, ...)
  - › Proper terminology
    - Proprietary vs. open source (NOT: commercial vs. open source)

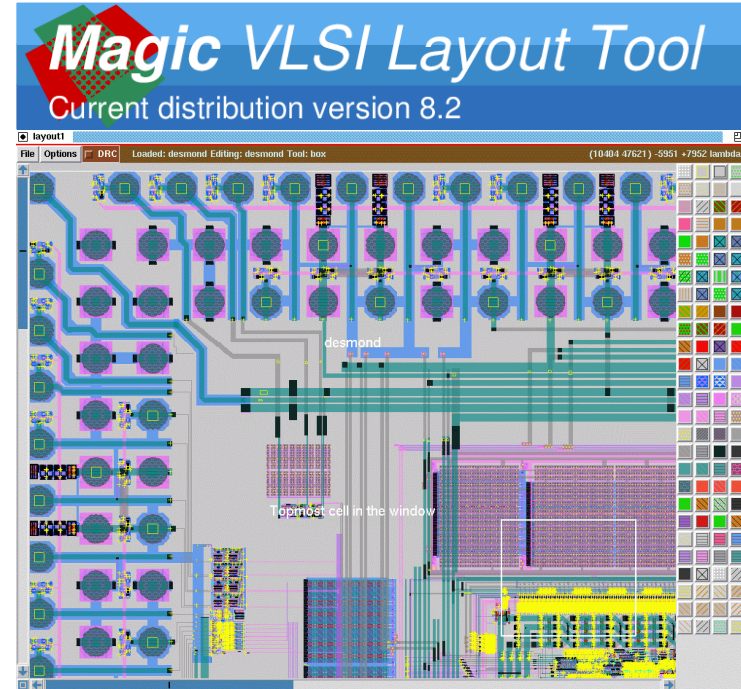

# Open Source is in Our DNA!

# Industry: Start-Up Companies

## chipIgnite for Startups

### Low-cost Development

Access to open-source tools enable low upfront cost for development.

### Accelerated Design

Reference designs and automated design flows enable rapid development.

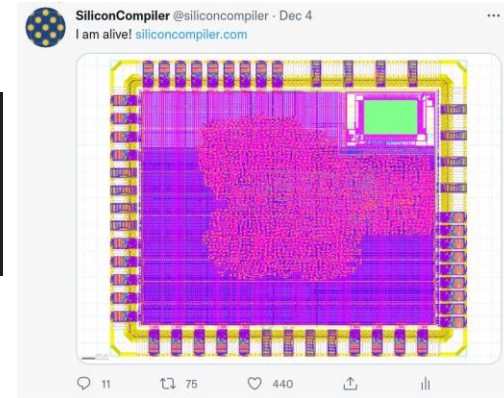

### You Don't Need to Be an Expert

Guided and automated flows make design easy for those without IC design experience.

## SiliconCompiler

ChipFlow

## Helping product companies to make their own chips

Open source is changing the rules of the game

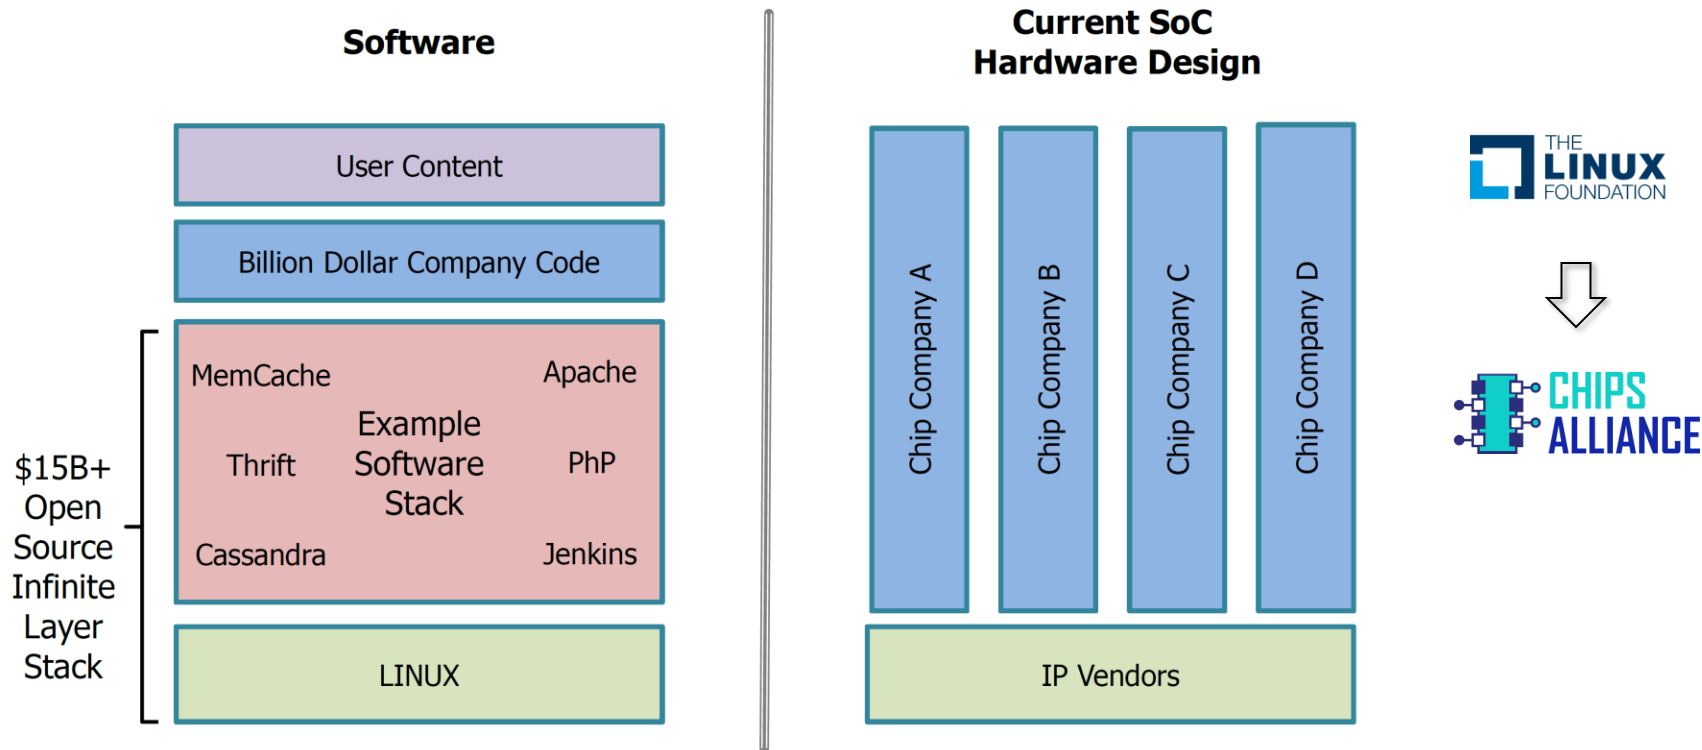

*SiliconCompiler is an open-source compiler framework that aims to automate translation from source code to silicon.*

*The SiliconCompiler project includes a standardized compiler data Schema, a Python object-oriented API, and a distributed systems execution model.*

***The project philosophy is to "make the complex possible while keeping the simple simple".***

# Ecosystem Stakeholders

Made possible  
by a donation  
from the CHIPS  
Alliance

/ Home / Membership / Awards / ISSCC “Code-a-Chip” Travel Grant Awards

## ISSCC “Code-a-Chip” Travel Grant Awards

### ISSCC “Code-a-Chip” Travel Grant Awards

**SUBMISSION DEADLINE: NOVEMBER 21, 2022**

The ISSCC 2023 Code-a-Chip Travel Grant Award was created to (1) promote reproducible chip design using open-source tools and notebook-driven design flows and (2) enable up-and-coming talents as well as seasoned open source enthusiasts to travel to the Conference and interact with the leading-edge chip design community. This program is made possible by a donation from the [CHIPS Alliance](#), a non-profit organization hosted by [The Linux Foundation](#).

#### Program rules

- The program is open to anyone (no restrictions). Membership in the IEEE Solid-State Circuits Society (SSCS) membership is encouraged, but not required. Teaming is encouraged, but each team must identify a single leader who can travel to the ISSCC from February 19-23, 2023, to receive the award.
- Applicants must submit an open-source Jupyter notebook detailing an innovative circuit design using open-source tools (examples: [inverter](#), [temperature sensor](#))
- Each submission must contain a suitable open source license (e.g., Apache 2.0).

12	DC-DC Buck Converter for CubeSat	Chile <sup>1</sup> /Argentina <sup>2</sup> /Uruguay <sup>3</sup> <sup>1</sup> Universidad Técnica Fed. Santa María <sup>2</sup> Universidad Nacional del Sur & Instituto Nacional de Tecnología Industrial <sup>3</sup> Universidad Católica	<a href="https://platform.efabless.com/projects/1427">https://platform.efabless.com/projects/1427</a>
13	Electrochemical Water Quality Monitoring	USA5 (University of Tennessee)	<a href="https://platform.efabless.com/projects/1469">https://platform.efabless.com/projects/1469</a>
14	Mix-Pix - A Mixed-Signal Circuit for Smart Imaging	Chile (Universidad del Bío-Bío)	<a href="https://platform.efabless.com/projects/1494">https://platform.efabless.com/projects/1494</a>

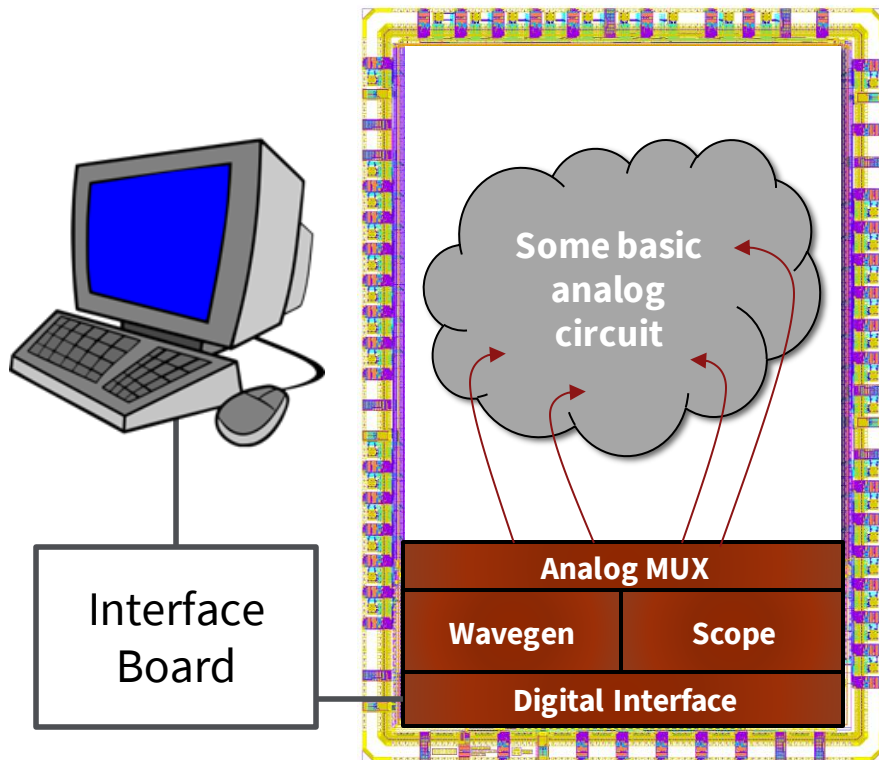

Magazine article: “Meet the SSCS PICO Chipathletes,” <https://ieeexplore.ieee.org/document/9950763>

# 2023 Chipathon (Ongoing)

- Build on-chip waveform generator and “oscilloscope” macros
  - › Collection of generally useful IP blocks
- Enable testing of low frequency analog circuits using only a PC
- Tape out first prototypes and improve with community over time

# Looking for More Volunteers!

- Possible tasks
  - › Evaluate submissions and milestone reports
  - › Attend weekly online meet-ups (~June-November)
  - › Give a short “how to” presentation during online meetup
  - › Provide technical guidance during meet-ups and via Chipathon Slack channel
  - › Prepare online tutorials, webinars, chapter talks
  - › Help with open-source tool & utility development
- Minimum time commitment of 1-2 hours per week
- Sign up at <https://sscs.ieee.org/volunteer-opportunities#SSCD>
  - › Or send an email to [bmurmann@ieee.org](mailto:bmurmann@ieee.org)

# Summary

- There is enormous excitement about collaborative, open-source IC design
  - › It will likely change the way we teach & work
  - › Fast growing community of ~5000 enthusiasts
- SSCS & CAS Program for Integrated Circuit Outreach (PICO)
  - › Engage with broader open-source community and contribute
  - › Code-a-chip travel grants, Chipathon, ...
  - › Volunteering & mentoring opportunities
- Let's all work together to add a new fun factor to IC design!
