

## IEEE PES Celebrating WISE International Woman's Day 2020

IEEE PES Singapore Chapter is technology supporting this event to promote Women in Science and Engineering (WISE) and jointly organize this event with Newcastle University in Singapore. Newcastle University in Singapore has established a WISE network and webpages in September 2018. We have been organizing events regularly to support female staff and students. As we see from the past few years, female students are less in all our programmes. The final year individual project is the major component in the BEng (Hons) course. To support all female students in their academic progress and facilitate them to achieve a higher score in their project component, this event is planned. Considering this, we organize a session for year 3 female students to give some tips on successful final year projects. It should be general guidance on how to make progress, things to consider in case of unexpected delays, meeting project milestones, etc. Based on our experience, we can certainly share the tips that are useful for you. We don't have female academics in all programmes, hence [me](#) and [Dr Noori Kim](#) share tips for Electrical Power Engineering and Mechanical Design and Manufacturing Engineering students. Since the female student numbers are less, you need not worry about attending the event in person. If you are a female and would like to attend this event, please come along with your friends.

*In aspiration to fight against COVID-19 crisis, IEEE PES promotes socially responsible. Please stay home and you need not participate in the event in case if you are sick or feeling unwell.*

**Title: Tips for successful Final Year projects**

**Venue: Level 5, SR5B, SIT Building @NYP, 172A Ang Mo Kio Avenue 8, Singapore 567739**

**Date: Thursday, 5<sup>th</sup> March 2020**

**Time: 1pm to 2pm**

**Refreshments are available for everyone**
